

IT Architect

WaveCloud is a dynamic new startup company that is developing an innovative new product for the Internet community. Be part of a team that will change the way that people socialize, transact and share on the web!

Do you think you have what it takes?

WaveCloud seeks a creative and methodical individual, in the greater Denver area, to architect and develop a robust, highly available and scalable IT infrastructure on which a LAMP-based Drupal application resides.

You will work with the WaveCloud CTO to design and implement an infrastructure that is responsive to the needs of increasing Internet traffic and content publishing; your solution will also provide security and privacy to its constituents. Your work will address the solution's short- and long-term needs for speed, security, availability and reliability.

You will collaborate with others from within our offices in the Denver Technical Center. Some remote work will be supported.

Required Skill Set:

- At least 3 years of experience developing network, security and technical architectures to support a high-traffic Drupal application residing on a LAMP stack.
- Proficiency with Drupal 6 & 7 architecture and backend, including
 - eCommerce (Ubercart)
 - PCI compliance
- Front end optimization (bandwidth optimization, CDN, sprites, HTTP headers, dynamic asset loading)
- Server & Site performance (reverse proxy caching, memcache, Drupal caching, MySQL and Nginx tuning, PHP profiling)
- Knowledge of web security
- Experience designing and implementing automated backup & migration strategies

Candidates should possess:

- A commitment and desire to work for positive social change
- Good spoken and written communication skills
- The desire to collaborate with others to achieve shared goals

At this time, for this role, WaveCloud is only accepting applications from candidates willing to contract.
