

View description *

This description will appear on the Views administrative UI to tell you what the view is about.

View Name *

Auto-generate

This is the unique name of the view. It must contain only alphanumeric characters and underscores; it is used to identify the view internally and to generate unique theming template names for this view. If overriding a module provided view, the name must not be changed or instead a new view will be created.

View Tag

Enter an optional tag for this view; it is used only to help sort views on the administrative page.

View type

Node

Examples of Nodes are news, press releases or blog posts

Node revision

Node revision are a history of changes to nodes.

Comment

Comments are responses to node content.

File

Files maintained by Drupal and various modules.

Term

Taxonomy terms are attached to nodes.

User

Users who have created accounts on your site.

The view type is the primary table for which information is being retrieved. The view type controls what arguments, fields, sort criteria and filters are available, so once this is set it **cannot be changed**.
