

Adding Video to Your Drupal Site

Modules Used

- CCK
- Views
- Filefield
- Imagefield
- Imagecache
- Image API
- SWF Tools (w/ JW Media Player)

Set up SWF Tools

- READ <http://drupal.org/node/303203>
- Download JW Media Player
- change “mediaplayer” to “flash_media_player”
- Add flash_media_player folder to swftools/shared folder
- Install & Enable SWF Tools and JW Media Player

SWF Tools Settings

- File Handling - Select JW Media Player for FLV and Mixed Media

Content

- Create Video content type
- Create video filefield
- Create video thumbnail filefield
- Display video field - select SWF Tools

Video Thumbnail

- Used a node-video.tpl.php file

```
<div id="media-player">
  <?php
    // Displays the media player with an Imagefield preview and the Play icon turned off
    print swf($node->field_video_file[0]['filepath'], array(
      'flashvars' => array(
        'image' => 'videos/thumbnails/' . ($node->field_video_thumbnail[0]['filename']),
        'icons' => 'false')
      ));
  ?>
</div>
```
