

Useful Drupal 7 Modules

This is a list of Drupal 7 modules I've found useful in my (very limited) Drupal development.

Color	What it Means
Clear	Found to be necessary. Installed/enabled by default.
Blue	Found to be useful. Installed by default/enabled as needed
Grey	Not ready for prime time. Not installed by default.
Yellow	Looking at possible future installation.
Pink	How is this helpful?

Name	Located At	Installation/Configuration Notes	What It Does
Administration Menu	http://drupal.org/project/admin_menu	Enable Administration Menu, Administration Menu Toolbar Style Disable Core: Toolbar	Admin Usability - Provides dropdown admin menu for easy navigation.
Module Filter	http://drupal.org/project/module_filter	Enable Other: Module filter	Admin Usability - Provides advanced filtering on modules admin page
Devel	http://drupal.org/project/devel	Enable Development: Devel and Development: Devel generate	Enables developers to create dummy users and content for testing.
Google Analytics	http://drupal.org/project/google_analytics	Enable Statistics: Google Analytics	Adds the Google Analytics web statistics tracking system to your website.
Chaos Tools	http://drupal.org/project/ctools	Enable Chaos tools	Used by many other modules. Page Manager module also very useful for...
Views	http://drupal.org/project/views	Enable Views, ViewsUI Requires: Chaos tools	Create customized lists and queries from your database.
Token	http://drupal.org/project/token	Enable: Other: Token Required by: Pathauto	Tokens are small bits of text that can be placed into larger documents via simple placeholders, like %site-name or [user]. The Token module provides a central API for modules to use these tokens, and expose their own token

			values.
PathAuto	http://drupal.org/project/pathauto	Enable Other: Pathauto In Configuration, set Default path pattern to [node:menu-link:title]/[node:title] to include the menu name in the page path.	To automatically create human-readable paths.
Demonstration site (Sandbox / Snapshot)	http://drupal.org/project/demo	Enable Development: Demonstration Site	This module allows you to take snapshots of your site. It turns a Drupal installation into a sandbox that you can use either for testing modules or setting up a public demonstration site for a module / extension / theme (you name it). Whenever you need to reset your site to a saved state a click of your mouse will do so.
Backup and Migrate	http://drupal.org/project/backup_migrate	Enable Other: Backup and Migrate	Backup or migrate the Drupal Database quickly and without unnecessary data.
Backup and Migrate Files	http://drupal.org/project/backup_migrate_files	Enable Other: Backup and Migrate Files	Add file backup and restore support to backup and migrate.
Backup and Migrate Dropbox	http://drupal.org/project/backup_migrate_dropbox	Enable Other: Backup and Migrate Dropbox Requires installation of Dropbox Uploader from http://jaka.kubje.org/projects/dropbox-uploader/ into sites/all/libraries/DropboxUploader	Allows Backup and Migrate to export backups to Dropbox . Doesn't seem to be working yet.
Omega Tools	http://drupal.org/project/omega_tools	Enable Theme Tools: Omega Tools	The Omega Tools module is a set of helper functions and custom functionality intended for use with the Omega Theme . However, the functions this module provides could be used with any theme.
Omega Theme	http://drupal.org/project/omega	Run Appearance: Create New Omega Subtheme	
References	http://drupal.org/project/references	Enable Fields: References, Node Reference, and User Reference	Enables the creation references between nodes and nodes and

			nodes and users. Supports basic 1:n relationships.
Relation	http://drupal.org/project/relation		Relation is an API module and storage model for both simple and the most complex relations between entities. The module can handle both directional and symmetrical relations very well.
Entity Reference	http://drupal.org/project/entityreference		Provides a field type that can reference arbitrary entities
Rules	http://drupal.org/project/rules		The rules module allows site administrators to define conditionally executed actions based on occurring events (known as reactive or ECA rules).
Panels	http://drupal.org/project/panels		The Panels module allows a site administrator to create customized layouts for multiple uses.
Context	http://drupal.org/project/context		Context allows you to manage contextual conditions and reactions for different portions of your site. You can think of each context as representing a "section" of your site.
Delta	http://drupal.org/project/delta		Delta allows you, via the Context module to make duplicates of your theme settings for any context on your site. This gives you the ability for alternative layouts as a reaction in Context...
Advanced Help	http://drupal.org/project/advanced_help		Not sure how this is helpful.
