

# Letter to the editor node type.

Title

Body

Select a node to reference

-- Select One --

New York Times  
Washington Post  
Boston Globe

Submit

These are all email field types created by the cck email field type module that already exists.

# Newspaper node types.

New York Times  
3200 45th St  
editor@nytimes.com

Washington Post  
1400 Mass. Ave  
letter@thepost.com

Boston Globe  
237 Paul Revere Hwy.  
letters@bostonglobe.com

The user chooses the "Boston Globe", and as a result, the letter to the editor node type which the user is in the process of creating gets emailed to "letters@bostonglobe.com"

The node is submitted, which creates the node, and then emails it to the email fields found on the referenced node. In this case, that is "letters@bostonglobe.com."

- 1. How can the format of the email be controlled/ customized? an email template module that lets the admin move around variables on the email based on available fields on the node type and site variables?
- 2. Can we mail attached files?
